

Mertinus Liberatus.

BEING AN

ALMANACK

For the Year of our Redemption,

1780.

Being the *Bissexile*, or *Leap Year*;

And from the Creation of the World, according
to the best History, 5727,

And the gift of our Deliverance by K. William
from Popery and Arbitrary Government ;

But the 85th from the

Horrid, Popish, High-Church, Jacobite Plot.

Wherein is contained all Things fitting and useful for such a Work, as
an Ephemeris of the daily Motions of the Planets, with their various
Configurations, Aspects, Conjunctions, Lunations, Eclipses, Astro-
nomical, Astrological, Meteorological Observations, the Rising and Setting
of the Sun, Moon, Planets, and fixed Stars, illustrated with Tables of
the Tides, Terms, and daily Equation of Clocks, Length and Break,
Increase and Decrease of Days, Semidiurnal and Seminocturnal Arches
for several Latitudes, a Chronology, Remarks on the Divisions of the
Heavens, with Judgments of the Eclipses, and also a particular Judg-
ment of a Nativity, handled according to the Rules of the Ptole-
mean Astrology, with many other Things relating to the Truth of
Astrology. With a particular Judgment of a visible Lunar Eclipse.

Calculated for the Meridian of *London*.

Whose { Longitude } is { 24 } Degrees { 20 } Minutes.
 { Latitude } { 51 } { 31 }

By **JOHN PARTRIDGE.**

LUDGATE-STREET.

[Price Stitched Nine Pence.]

Whomsoever, &c. 306

A FURTHER CONTINUATION FROM MY LAST.

BUT where the fear of God is wanting, many times it happens that these ignorant artists, tickled with the applause of their good fortune, and bewitched with the love of gain, which they have felt so lightly coming in, and thereupon spurred on with a vehement desire to keep up both their fame and profit, but withall being loath to take pains to study for it, after they have been at first flattered with fortune's favours courting them at so easy a rate, and now at last feeling that good luck begins to fail, they strike in with the devil, a master easy to be found, and so graft upon the stock of nature's blessing an offset of Satan's endowment, for the supply of their failing good fortune, and the support of their ambitious and covetous desires. And thus many an ignorant and harmless skill, buoyed up merely by luck at first, turns in time into flat sorcery. And not only these ignorant fellows, but too many of the learned sort also, being naturally evil natured people, and complying with their bad humours, do make them worse by evil habits, and growing ever worse and worse without the happy turn of repentance, and having no knowledge of God, do become in time an easy prey unto the devil's bait; and what with the itch of desire to know more, and to do more than nature and industry can well afford to teach them, and what with the desire of vain glory and covetousness being drawn in, these also turn forcerers. Yea, and not only evil natured men, but also persons as well qualified as nature can make them, for want of good education, fall into bad manners, and so corrupting nature, become as bad as the worst; and not only so, but some also never so well educated, by reason of ill company, forfeit all the hopes that goodness had seemed to found in them; and these also in time turn forcerers too, many of them, and this they may do too aptly, whether ever they study any thing of astrology. But true it is, that too many astrologers, using their skill more prophanelly than religiously, and finding that their rules of natural art cannot tell them all things they would know, or so easily
and

and so quickly as they would know them, despising therefore these lawful and most excellent studies, they fall into the study and practice of geomancy, forcery, and plain witchcraft. The devil, though he be a most damnable apostate yet is an angel, and as such has skill in all natural causes, and the reason of future contingences, beyond the most learned of mortal men that ever wrote, except such who spoke and wrote by divine inspiration. Now if any man will so far fall from God as to be confederate with this apostate, or any of his infernal imps, there is no doubt but he may save the labour of a world of study which it costs other men; and he shall have his astrology at second hand by a kind of diabolical inspiration, and that more readily and more punctually to the purpose than they who by great labour and pains come more honestly by it: but then loses he his soul by the bargain, and woe be to him that gets by such kinds of intelligence and correspondence.

Of kin to these kind of people are common gypsies, who, as they counterfeit the features of natural Egyptians by a mere artificial swarth wherewith they besmear their English faces, so abuse they the world with a dissembled skill of discerning secret and future things, whereas they know nothing at all but what they have by mere diabolical and juggling tricks, for either they are infernally inspired, or else they are mere cheaters. As for matter of real skill, seldom it is that any of them have any at all, neither have they any of them any reason or ground for what they say besides a mere kind of chance; but their confederate the devil has a real and a great skill, and has withall a secret way whereby invisibly and undiscerned he suggests words into his prophet's lips. For as the Holy Ghost miraculously inspired the apostles so as to make them speak all languages, so the devil also has his way, after a sort, insensibly to communicate thoughts into people's heads, and words into their mouths.

(Of these, God willing, more in my next.)

A Table of the Moon's Age for every Day throughout this present Year 1780. Whereby, with the Help of the next general Tide-Table, the Time of High Water at all the Places above-mentioned in it, are shewn by Inspection.

An Explanation of this and the following Table.

Inspection.

First find the Month in the Head of the Table, and the Day in the first Column on the left Hand, and in the Angle of Meeting you have the Day of the Moon's Age, with which enter the following Table, and find your said Number in the left Hand Column, and over against it in the other Columns is the Time of High Water at all the Places above mentioned, by Inspection.

Example, January the 17th, I find the Moon to be 11 Days old, and over-against 11 in the first Col. I find 11 Hours 48 Min. in the second Col. 10h. 18' in the third, which is the Time of High Water at all those Places mentioned above in the 2d and 3d Columns. *Et sic de cæteris*

A Table of Terms and Returns, for the Year of our Lord 1780.

Hilary Term begins Jan. 24, ends Feb. 12.

Returns or Effoign Days.	Exc.	Ret.	App.	W.D
In eight Days of St. Hilary, January 20	21	22	24	Monday
From the Day of St. Hilary, in 15 Days, 27	28	29	31	Monday
On the Morrow of the Purif. of bl. V. M. F. b. 3	4	5	7	Monday
In eight Days of the Purif. of bl. V. Mary, 9	10	11	12	Saturday

Easter Term begins April 12, ends May 8.

From the Day of Easter in 15 Days, April 9	10	11	12	Wednesday
From the Day of Easter in 3 Weeks, 16	17	18	19	Wednesday
From the Day of Easter in 1 Month, 23	24	25	26	Wednesday
From the Day of Easter in 5 Weeks, 30	31	2	3	Wednesday
On the Morrow of the Ascension, May 5	6	7	8	Monday

Trinity Term begins May 26, ends June 14.

On the Morrow of the holy Trinity, May 22	23	24	26	Friday
In eight Days of the holy Trinity, 28	29	30	31	Wednesday
From the Day of the holy Trin. in 15 Days, June 4	5	6	7	Wednesday
From the Day of the holy Trinity in 3 Weeks, 11	12	13	14	Wednesday

Michaelmas Term begins Nov. 6, ends Nov. 28.

On the Morrow of All Souls, Nov. 3	4	5	6	Monday
On the Morrow of St. Martin, 12	13	14	15	Wednesday
In eight Days of St. Martin, 18	19	20	21	Thursday
From the Day of St. Martin, in fifteen Days 25	26	27	28	Tuesday

N. B. No Sittings in *Westminster-Hall* on *Ascension-Day*,
Midsummer-Day, and the 2d of *February*.

The *Exchequer* opens eight Days before any Term begins
except *Trinity*, before which it opens but four Days.

Note, That the first and last Days of every Term are the
first and last Days of Appearance.

Good is the Law, and to do Good design'd :
If it's Executors, for Gain, shall grind
The Face of Justice, and oppress the Poor,
There is another Law for them in store,
Which neither Judge nor Jury can withstand —
No Writs of Error frustrate Heaven's Hand.

January hath XXXI Days.

As indigested and confused lay,
The World by God m^ashapen till third Day,
His mighty Fiat made it smooth and even,
The Earth and Seas in Shape as well as Heaven,
Omnipotent all his great Works so fair,
As their Great Maker's Blessedness declare.

March hath XXXI Days.

When Brutus's three Sons were Lords of all our Land
 Then Peace and Plenty walked Hand in Hand;
 Uninterrupted Joys o'er all the Plains,
 And Valleys, wafted daily on the Swains;
 They knew no anxious Thoughts nor wrinkled Cares,
 Age slid gently, undisturb'd with Fears

April hath XXX Days.

Till the warlike Romans, flush'd with Conquest round
On England's Shore, alas! sure Footing found,
And kept the same till their great Empire's Sway,
Worn out with Time, did dwindle and decay;
Their Arms victorious 'gainst all things but Fate,
Which early puts an end to all, or late.

May hath XXXI Days.

The greatest Empires thus submit to Fate, [great,
And States, with Kingdoms, tho' they're ne'er so
Give place to Time, and moulder in the Dust,
At certain Periods; tho' they were ne'er so just
And perfect in dispensing Justice round,
Yet none of them but what Conclusions found.

1	Δ	20	3 16	9 48	3M 56	There have been lately many meetings of worthy persons, who by their consultations, have put matters into good order, to the satisfaction of the public. And the Heavens do still forebush, that in many parts, as England, Scotland, Ireland, France, Germany Poland, &c. with many other countries and kingdoms, there will be notable consultations of high matters, which doubtless will be happily effected. The 10th of this month 1744. was long or most glorious Q. Charlotte, whom God long preserve, for the good of the protest-

J U N E hath XXX Days.

Next came the Danes, and Normans with success,
 And as the fates would have it, gain'd no less
 Than the Romans, but the Almighty's care,
 In time delivered us, from them and fear;
 From that time forward, ne'er again to be,
 A prostrate victim to an enemy.

JULY hath xxxi Days.

Since which, no conquest o'er the land was know n
 But factions, civil wars, have often shewn.
 King John, unhappy prince (by a monk betray'd)
 'Twixt him and barons, its first instance made.
 What is't deceitful hearts can then refrain:
 False honour, promoting to the love of gain.

AUGUST hath XXXI Days.

What bloody fights, and battles often were
'Twixt the two houses, York and Lancaster.

It is almost incredible to tell

On that account, how many thousands fell.

Embru'd in blood, the nation seem'd all o'er,

And noble corps lay weltring in their gore.

SEPTEMBER hath XXX Days.

Last civil war, how many battles fought,
By king and Parliament together brought;
Till he, at length! a sacrifice did die,
To appease the tempest of his country.
So falls the o'ergrown tree, whose noisome shade,
Blasts the mild produce of the verdant glade.

OCTOBER hath XXXI Days.

Since that great daring act our nation stands,
 Secur'd from foreign, or intestine bands;
 Enrich'd with all things which we useful call,
 As Eden's garden was, before the fall.
 Here stately turrets, mount above the trees
 On curious prospect fixt, the eye to please.

NOVEMBER hath XXX Days.

M 12 24
D 4 m

Here shady woods, and pleasant meadows green,
And fields with corn, and shepherds flocks are seen,
Returning to their owners, as their lords
The fruitful burdens each of them affords,
Here's cities, towns and markets, ports and fairs,
All fit for trading people, and for wares.

DECEMBER hath XXXI Days.

Whereby the merchant in esteem doth come,
 And send out ships, o'er all the world to roam.
 But oh, how innocently happy were of old,
 The ancient Britons 'fore, the love of gold
 Possess'd their hearts, with sneaking avarice,
 A sin that's shunn'd, and fled from by the wise.

A Table of the Common Notes, and moveable Feasts,
for the Year of our Lord 1780.

Golden Number	14	Easter Sunday	March 26
Cycle of the Sun	25	Rogation Sunday	April 30
Dominical Letter	B A	Ascension Day	May 4
Epact	23	Whit Sunday	May 14
Roman Indiction	13	Trinity Sunday	May 21
Sundays after Epiphany	2	Sundays after Trinity	27
Septuagesima Sunday	Jan. 29	Advent Sunday	Dec. 3
Ash Wednesday	Feb. 9	Year of the Julian Per.	6485
Number of Direction	15	Year of the Dionysian	104

A Table of the 12 Signs, 7 Planets, and Aspects.

♈ Aries, <i>Head and Face.</i>	♄ Saturn.
♉ Taurus, <i>Neck and Throat.</i>	♃ Jupiter.
♊ Gemini, <i>Arms and Shoulders.</i>	♂ Mars.
♋ Cancer, <i>Breast and Stomach.</i>	☉ Sol, or the Sun.
♌ Leo, <i>Heart and Back.</i>	♀ Venus.
♍ Virgo, <i>Bowels and Belly.</i>	☿ Mercury.
♎ Libra, <i>Reins and Loins.</i>	☾ Luna, the Moon.
♏ Scorpio, <i>Secret Members.</i>	♁ Dragon's Head.
♐ Sagittarius, <i>Hips and Thighs.</i>	♏ Dragon's Tail.
♑ Capricorn, <i>Knees and Hams.</i>	☿ Part of Fortune.
♒ Aquarius, <i>Legs and Ancles.</i>	♁ Tellus or Earth.
♓ Pisces, <i>Feet and Toes.</i>	
♌♈ Conjunction, <i>In one Sign and Degree.</i>	<i>Venus is Occi-</i>
* Sextile, <i>is 2 Signs, or 60 Degrees.</i>	<i>dental & an Evening</i>
□ Square or Quartile, <i>is 3 Signs or 90°.</i>	<i>Star till the 10th of</i>
△ Trine, <i>is 4 Signs or 120 Degrees.</i>	<i>August, from thence</i>
♌♏ Opposition, <i>is 6 Signs or 180 Degrees.</i>	<i>she becomes Oriental</i>
	<i>& a Morning Star to</i>
	<i>the Year's End.</i>

♈♌ ♀ Hot and Dry, Fiery	♋♏♑ Cold & dry, Earthy
♈♎♑ Hot and moist, Airy	♋♌♑ Cold & moist, Watery
♈♌♑ ♀ Diur. Mascul.	♋♏♑♌♑ Noct. Femin.
♈♋♑ Cardinal & Movea.	♋♌♑ Fixed Signs
♈♏♑ Common Signs	♋♌♑ Fruitful Signs
♈♌♑ are Barren	♈♌♑ Bicorporal

<i>Kings Names.</i>	<i>Reigns began.</i>	<i>The direct Lineal Descent of His Majesty K. George III.</i>
William Conq	Oct. 14, 1066	Henry II. K. of England, had
William Rufus	Sept. 9, 1087	Maud mar. Hen. the Lion, D.
Henry 1.	Aug. 2, 1100	of Bavaria and Saxony, had
Stephen	Dec. 1, 1135	Wil. of Lun. mar. Helena, D.
Henry 2. Rosam.	Oct. 25, 1154	of Worldemer, K. of Den. had
Richard 1.	July 6, 1189	Otho D. of Brunf. and Lunen.
John	April 6, 1199	_____ had _____
Henry 3.	Oct. 19, 1216	Albert the Great D. of Brunf.
Edward 1.	Nov. 16, 1272	_____ had _____
Edward 2.	July 7, 1307	Albert the Fat D. of Brunf.
Edward 3.	Jan. 25, 1327	_____ had _____
Ric. 2. W. Tyler	June 21, 1377	Magnus D. of Brunswick
Henry 4.	Sept. 29, 1399	_____ had _____
Henry 5.	Mar. 20, 1413	Mag. Torquat. D. of Bru. & Lun.
Henry 6.	Aug. 31, 1422	_____ had _____
Ed. 4. J. Shore	Mar. 4, 1461	Bernard D. of Brun. & Lun.
Edward 5.	April 9, 1483	_____ had _____
Richard 3.	June 22, 1483	Frederick Duke of Lunenb.
Henry 7.	Aug. 22, 1485	_____ had _____
Henry 8.	Apr. 22, 1509	Otho the Great D. of Lunenb.
Edward 6.	Jan. 28, 1547	_____ had _____
Mary 1.	July 6, 1553	Henry Duke of Lunen. had
Elizabeth	Nov. 17, 1558	Ernest Duke of Lunenb. had
James 1.	Mar. 24, 1603	Wil. D. of Lunen. Zel. had
Charles 1.	Mar. 27, 1625	Elizabeth, mar. Fred. K. of
Charles 2.	Jan. 30, 1649	Bohemia, had Geo. P. of Cal-
James 2.	Feb. 6, 1685	lenbar and D. of Hanover.
Will. 3. & M. 2.	Feb. 13, 1689	had Sophia, mar. Ernest-Au-
Anne	Mar. 8, 1702	gustus Bishop of Osnaburgh,
George 1.	Aug. 1, 1714	and Elector of Brunswick,
George 2.	June 11, 1727	Lunenburgh, had George, by
George 3.	Oct. 25, 1760	the Grace of God, King of
		Great-Britain, &c. who had
		George II. who had Fred. Pr.
		of Wales, who had George III.
		his present Majesty, whom
		God preserve.

N. B. In the Kalendar Part you will find the Planets South-
ing inserted to several Days in each Month; and by this
Table you may easily find their Rising and Setting: First
find the Longitude for the Day proposed, with which enter
this Table, and take out the Semidiurnal Arch thereof,
which being added to the Time of Southing, gives the
Setting, but subtracted the Rising.

PARTRIDGE, 1780.

Of the ECLIPSES that will happen in the Year 1780.

IN this year there will happen two Eclipses of the Sun, and as many of the Moon; out of these four, only one, and that of the Moon, will be visible in our hemisphere. They happen in the following order:

The first is a solar defect, upon Thursday, the 4th of May, at 55 minutes after 12 o'clock at noon; but if the Sun shines ever so bright, we shall see no Eclipse in these parts of the world, by reason of the Moon's south latitude. It will be a large Eclipse at the Cape of Good Hope, for in 6 degrees and a $\frac{1}{2}$ of west longitude, and about 44 deg. of south latitude, the Sun will be centrally eclipsed at noon-day, and very nearly total.

The second is a partial Eclipse of the Moon, on Thursday, the 18th of May, the middle time of which is at 2 min. past 11 o'clock in the forenoon with respect to London, and the Eclipse will be over at 39 min. past noon, therefore none of it can be visible to any part of Europe; but in all the western parts of America, both North and South, as far as Cape Horn, this Eclipse will be visible; as also in New Zealand, New Holland, the Phillipine Isles, Japan, Yedso, and upon the Eastern coast of China and Great Tartary. Digits eclipsed at the middle are an hand and an half on the Moon's upper limb.

The third is another Solar Eclipse, and happens on Friday, the 27th of October, at about half an hour past 5 o'clock in the evening; but as the visible conjunction of the Sun and Moon will be much later, no part of this Eclipse will be visible to us in Great-Britain. This Eclipse will be very large in some parts of North America.

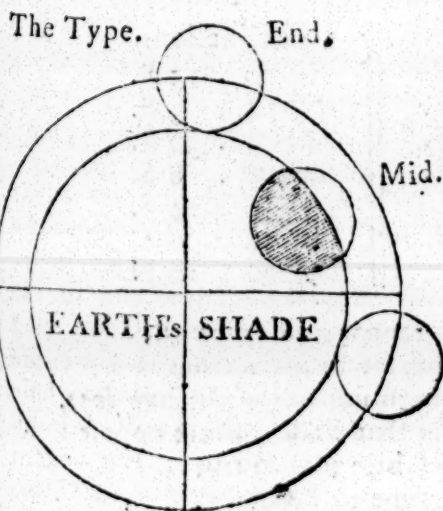

The fourth and last is a partial and visible Eclipse of the Moon (if clouds interpose not) on Sunday November the 12th in the morning: At the time of greatest obscuration, the moon is vertical to the island of Hispaniola in the West Indies, in 60 deg. west longitude from London, and in 10 deg. 26 min. whence it appears, that this Eclipse will be visible from the beginning to the end, to the whole of that great continent of America, all the West India islands, and to most part of Europe, and to all the western parts

PARTRIDGE, 1780.

parts of Africa, which lie north of the equator. The Moon will be observed first to touch the shadow of the earth (at London) at 7 min. past 3 in the morning. The time of greatest obscuration will be at 33 min. past 4, and the Moon's lower limb will leave the earth's shadow again exactly at 6 o'clock, solar time, after having been darkened to the left hand, 7 digits and a half.

April the 19th, in the evening, the Moon will transit a Star of the second magnitude, in the southern scale of Libra; the following delineation shews the appearance as it may be expected at London, but will very well serve throughout the whole kingdom. The Moon's lower limb first touches the Star (at London) at 7 min. past 8, and she will leave the said Star again a little to the right hand of her upper limb (as the type sheweth) at 3 min. past 9, apparent time.

N. B. A telescope of some sort will be necessary to observe this occultation. These calculations, with the types below, were transmitted to me by my astronomical friend, Mr. HENRY ANDREWS, Teacher of the Mathematics at Royston, in Herts, with whom youth are boarded and made fit for business. He also makes barometers and thermometers with the utmost accuracy. The type of the Moon's Eclipse, May 30th, last year, was shaded wrong, but it was sent right by my correspondent.

Type of the Occultation,
April 19.

PARTRIDGE, 1780.

Urania by no such as those will stand,
Nor to such fools will ever lend a hand;
Their ill behaviour never was respected,
But by Urania ever was rejected:
For she no favour doth extend to those,
That doth the Starry influence oppose.
There's Astronomers, Astrologers here,
And both consulted in th' ensuing year;
Who'er likes the one and not the other,
Does go about a glorious truth to smother:
Then for conclusion let it be remembered,
Whoever's wanting here, here can't be numbered.

At the middle of this Eclipse, and greatest obscuration of the Moon, as aforesaid, 25 degrees of Cancer culminates, and 19 degrees of Libra ascends on the East; Saturn and Mercury are conjoined in the 3d and 8th deg. of Sagitary, ☉ in the 2d; Mars and Venus are just risen into the 12th, and the eclipsed Moon is in the 8th, separating from the Opposition of Jupiter, and applies to the Trine of Venus, she being ruler of the Eclipse: and were it not that Venus is oppressed by her Conjunction with Mars, and he is Lord of the 7th angle, I would have esteemed this figure to have intended some good, for all Eclipses are not of envious signification, but are good or bad as their lords are disposed. And authors tell us, that an Eclipse of the Moon, in the 20th deg. of ♎, denotes the death of some famous queen or princess, also a dearth of corn and useful grain, and a sterility of all things growing on the earth, and as it happens in the earthly triplicity, and in the 8th house, it is the forerunner of an earthquake.

Johannes Angelus tells us, the eclipsed decanate is a significator of power, nobility, dignity, and also necessity to the vulgar; and he represents it to a tall man, girt with a girdle, holding a key in his right hand. I will not determine fully to interpret this mysterious character, only thus much we may observe from our Bavarian's dark text, That tall men have the advantage of others, chiefly if of noble race, vested with power and dignity, and well girt, or provided to encounter Opposition—And that a key imports safety or security.

This

P A R T R I D G E, 1780.

This Eclipse, as celebrated in 8. relates to Russia, Poland, Lorrain, Ireland, &c. all which kingdoms and countries will be more or less concerned in the effects of this Lunar Deliquium. Private persons also, whose genitures conspire therewith (chiefly if they relate to the fixed quadrangle) will be sharers in the effects: Cities, towns, and societies of men, are not excluded from being passive under these ecliptical influences, as their grand hylechs may be thereby obviated.

Judicium Astrologicum for the Year 1780.

I Begin my judgment of the year 1780, from the ingress of the Sun, into the tropical sign Capricorn, which happens on December the 21st, at 57 min. past 9 at night, 1779, at which time all the seven but the Moon, are under the earth; and the most material aspects near to this ingress, are a Conjunction of Venus and Mercury, a Square of Jupiter and Venus, and another Square of the two infortunes, viz. ♄ and ♀, and the Moon is in the 10th, going from the Opposition of ♄; and were a scheme to be erected, you would find 2 deg. of ♋ culminating, and 9 deg. of ♊ ascending. Now, my opinion is, that the Conjunction of ♀ and ♄ near to the body of the ☉, with the Square of the infortunes, will really and solely weigh the actions and affairs of this Winter quarter, and would take up more room to write my opinion of their effects than I have allowed me for the whole year, and therefore I will be as short as I can in the matter, without troubling you with the opinion of any authors about it. It is indeed a very ill congress, because they are all four, according to their present disposition, of a malefic nature, and yet three of them are under the rule and government of the Sun, as being near to him, and have a confined and limited power, and would do mischief, but that they are afraid; nay, but they are a sort of men who will do what mischief they can nevertheless, and their effects seem to have a triple tendency. 1. To publick affairs, and so they hinder the advantageous designs under consideration for the peace of mankind, stir up new ferments and heats in

P A R T R I D G E, 1780.

in the councils and courts of princes, tending to ruin and confusion, hatch and contrive plots against the established government in a certain kingdom of Europe; and all these will be managed with great privacy, because the Planets are subterranean; but they will have the good fortune to meet with discoveries, and as they are traitors to their country's good, so they will be to another, and these things will appear more plainly about the end of February and beginning of March; and, 2. I am afraid mankind will be effected as to health and constitution in general, by preternatural ferments in the stomach, by putrid fevers, by asthmatic coughs, agues, hectic, and chronic diseases in general, and this throughout the whole Winter Quarter, in some parts and cities, according as they are situate or governed by the presiding malefic stars.

3. The affairs of this quarter will be very private, and very closely carried on, and the councils of Europe will be extremely busy and intent on certain things; but with what success I leave time to determine; yet by what I can see by the positions in general, those who are studious and busy to promote wars and confusions, will have more success than those who labour for and after peace.

Of the VERNAL, or SPRING QUARTER,

WHICH begins on March the 19th, at 43 minutes past 11 at night, at which time 25 deg. of Virgo culminates, and the beginning of Sagitary ascends the Eastern horizon. In this figure we find the Cœlestial family in a very good humour, and in a good peaceable posture, no hostile beams afflicting either the Sun or the Moon. Jupiter still keeps his court in the Cœlestial balance as if he intended to stay there, to wipe off the calamities that the last conjunction of the infortunes hath left as a legacy to mankind, and set the world again in statu quo; but as ♄ is posited in the ascendant, and the ♃ is applying to the Opposition of the ☿ and Mercury, this shews that those means tried for peace, meet both potent and vigorous enemies, and that those who make a trade of war, are not yet willing to beat their swords into ploughshares, and their spears into pruning-hooks, and introduce
that

P A R T R I D G E, 1780.

that prophesy of Ifaiah, that " Nation shall not lift up
" sword againſt nation, nor ſhall they learn war any
" more." No, no, that time is not yet come, but it is
coming, and the whole creation groans for it ; then will
the calamities of this miſerable life be commuted, and the
malevolent rays of the Stars ſhall then have no more ma-
lignity in their effects than they had before Adam finned
and tranſgreſſed the command of God in Paradife. Now,
in my judgment, the poſitions of the Planets at this in-
greſs, do ſhew a diſpoſition of mankind to peace this
year in general, and that there will be methods uſed for
the attaining thoſe ends, and this in divers courts and
countries of Europe. Hence we may conclude, that there
may be ſuch an undertaking, but that it will go on but
ſlowly and heavily, and take up a great deal of time to
little or no purpoſe ; and this ſeems viſible, if you conſider
that Saturn and Mars are pretty ſtrong ; Mars is con-
joined with Venus, and Saturn is angular in the aſcendant,
and caſts a Square to the Moon, which ſhews likewiſe,
that there will be not only a difference, but things of that
kind will be openly and vigorously oppoſed ; and yet I am
of the opinion, that from this time it will go on, and leſs
or more it will be always under conſideration till it is per-
fected and ended, which I am afraid will not be preſently
or immediately after it's inception, which brings me to

The S U M M E R Q U A R T E R,

WHICH begins this year, June the 20th, near 10
at night, at which time 1 degree of Sagitary cul-
minates, and 28 deg. of Capricorn aſcends. In this ſcheme
we find no poſitions that are remarkable, yet I will give
my opinion in a ſhort judgment on thoſe things moſt fit :

The Sun, we find, has lately been in Trine of Jupiter,
and now is conjoined with Mercury, and from thence,
haſtens to the body of Mars, though at a diſtance of 9 deg.
from the cusp of the 6th houſe. Hence I judge their in-
fluence will be ſpent in defeating the affairs of embaſſies
and ambaffadors, or clogging their deſigns with things not
expected. It alſo ſhews the death of great and eminent
ſtateſmen, or at leaſt afflicts them with the gout, and alſo
puts the affairs of ſome king of Europe in an ill condition.

The

P A R T R I D G E, 1780.

The Moon is naturally a significator of all the common and most general actions of our lives, of messengers also, travellers, popes, legates, &c. And in this figure, for that reason, she doth, by a double power, personate and signify ambassadors, envoys, residents, and men in general of that power and office. I do therefore hence judge, that there will be some motions for peace, and either some new treaty begun, or else some old one revived; and this done and managed by men of eminent characters and repute, at or about this time, or within the compass of this quarter: But, I do indeed judge it will have a very slender and sorry effect at present, if not perfectly refused, denied, and laid by at the command and dislike of a Saturnine man, as you may see by the position of Saturn, retrograde in the med cœli; and as the Moon applies here to the Opposition of Venus and Trine of Jupiter, so I judge there will be a good seasonable as well as a plentiful harvest, and that especially of the most useful grains applicable to the benefit of mankind.

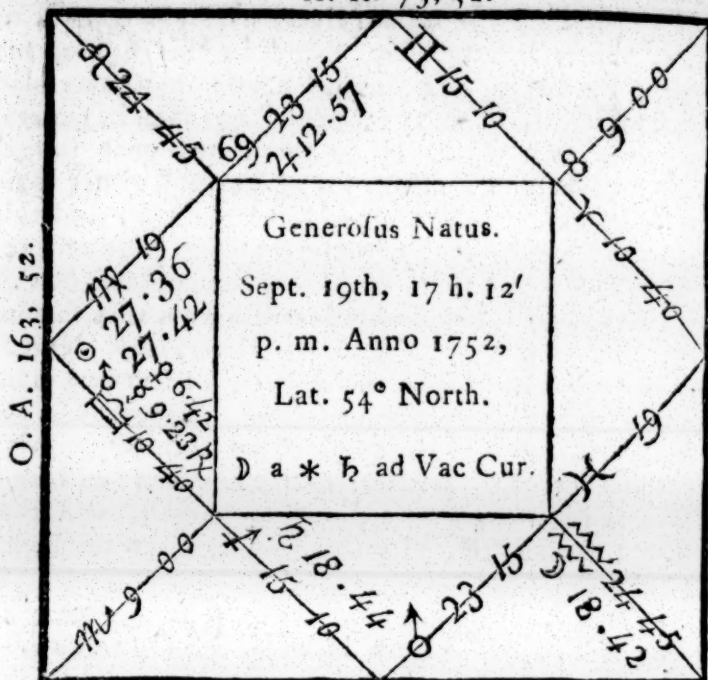

OF THE AUTUMNAL OR HARVEST QUARTER,

WHICH begins September the 22d, at half an hour before noon; and in the scheme there are 28 deg. of Scorpio ascending, and 22 deg. of Virgo culminating, with the Sun in the 10th, and Mercury and Mars on the cusp, Saturn in the ascendant. Now the most material aspects at this ingress are, a Conjunction of δ and ζ , a Square of η and ζ , and a Square of η and δ . Of such position the learned Sir Goad tells us, the aspects of those Stars afford tempestuous and foul weather of all sorts, and yet Placid de Titis in Ephemerides in finis Partis primi says, That the rays of η and δ , because of their excess in quality, do inhibit blowing windy weather; yet allows when they do give it, it is of a mischievous and unhealthy nature, and tends to the ruin of all living creatures, by stirring up a destructive ferment in the principles of nature. But because both these learned gentlemen have laid down rules for judging the weather in general, I will refer the ingenious readers to their own words, for a more perfect satisfaction in the matter.

A. R.

PARTRIDGE. 1780.

A. R. 73, 52.

Lat. Planetanina.

Decl. Plan.

♂ 1°. 8' N.D.	♀ 1. 17 N.D.	♂ 21. 52 S.A.	♀ 2. 0 S.A.
20. 8 S.D.	♀ 3. 46 S.D.	22. 43 N.D.	♂ 7. 0 S.A.
♂ 0. 53 N.D.	♂ 5. 5 N.D.	♂ 1. 38 N.D.	♂ 10. 0 S.D.
		☉ 1. 0 N.D.	

This figure is the nativity of a gentleman in the North; not having room to consider it, I shall only deliver an aphorism or two of it — 1. The lord of the ascendant, is also lord of the 10th, which shews preferment will come by his own endeavours, and chiefly by arts and sciences. — 2. ♀ conjoined with ♀ in her own house, and a cardinal sign, makes the native a pleasant merry companion, and being placed upon the 2d, may give a durable substance and raise the native considerably above his birth. — 3. And as there are three Planets in cardinal signs, and ☉ and ♂ upon the verge of entering in, though we have not cardinal signs on the angles, yet I do say that these planets so posited, do certainly make men famous and prodigious in their generation; and so I desist till another opportunity.
